

NEW UNDERGRADUATE PROGRAM PROPOSAL

ILLINOIS INSTITUTE OF TECHNOLOGY

The following information is required by the Undergraduate Studies Committee to approve new programs. After approval by UGSC this form should be routed to Faculty Council for approval and then the Provost's office.

College(s): College of Science

Department(s): College of Science

Date: Jan 20, 2017

Approvals Required

(1) Academic Unit Head(s):

(2) Dean(s):

(3) Undergraduate Studies Chair:

GENERAL INFORMATION

Program Title: Medicinal Chemistry

Program Scheduling: Fall 2017

Total Program Credit Hours: 127-128

Program Description: *Provide a brief narrative of the program content (use as much space as needed).*

Medicinal Chemistry is a specialized area of chemistry with an emphasis on a study of medicine, pharmaceuticals, and biomedical applications. The program will provide students with learning opportunities to develop a sound interdisciplinary understanding of drug action and drug design. The program will prepare students with a strong background in the traditional chemistry areas and the technical skills required to place and advance their careers in the biomedical, medical, and pharmaceutical fields.

Program Purpose/Program Benefits: Provide details on the intent of the program and its relation to other programs. State the impact of the program for students and for IIT.

See the attached document for more detailed description on purpose, intent, and benefits of the program.

At Illinois Tech, the Chemistry Department provides a rigorous and high quality education in Chemistry. While the American Chemical Society (ACS)-approved chemistry programs at most other academic institutions require 120 credits, Illinois Tech Chemistry requires more credits (127-128 total, 58 chemistry credits) for the same degree. Although the higher credit requirement is beneficial for student education, it also makes IIT chemistry program the least affordable in the Chicago area and has a negative impact on our enrollment. For example, in Fall 2016, there were 27 chemistry majors at IIT vs 440 majors in the chemistry department at Loyola University Chicago. Many chemistry departments at US academic institutions offer diverse BS degree programs in addition to the traditional BS degree in Chemistry. They have crafted specialized and area-focused BS programs with a good overlap in curriculum. For instance, the department of chemistry at University of South Florida offers three medical-related BS degree programs, and one of the programs, BS in Biomedical Science has an unusually high undergraduate enrollment (> 3,000 majors).

The IIT BS Chemistry program requires students to complete 6 elective courses (18 credits total). We propose to create new chemistry programs that use the available credits to train chemistry majors in a specialized area. In the new programs, students will be trained as viable candidates with good entry-level skills for the job market and for entrance to graduate programs, including medical and pharmacy school. Students will have learning opportunities to gain various hands-on techniques by taking the lab courses customized for industrial need in addition to the standard lecture-based courses. The students are expected to develop good basic understanding of the subject matter and sound knowledge of chemical applications to the specialized fields. This in-depth and crafted training approach will benefit students in the specialized programs with requisite educational background to develop their competitive career paths.

We first identified the *core* areas for creation of new BS programs with emphasis on Bio, Medicine, Data, Analytics, Environment, and Safety. We then selected the new programs based on our review of various factors: i) Unique BS degree programs, at least in the Chicago area; ii) Major areas attractive to high school and undergraduate students; iii) Specialized degrees in high demand from industry; iv) Undergraduate programs with high growth and enrollment at peer institutions; v) Affordable programs that can be taught and designed by Illinois Tech Chemistry faculty; vi) Curriculum in good overlap for area-focused multi-degree programs.

We now propose the new BS degree programs in Bioanalytical Chemistry, Environmental Chemistry, Forensic Chemistry, Medicinal Chemistry, and Computational Chemistry and Biochemistry. The highly area-focused, diverse, affordable, and marketable programs and are to increase the quality and distinctiveness of Illinois Tech education and make expected to make a significant impact on undergraduate enrollment.

The Medicinal Chemistry degree is proposed as one of the new Area-Focused programs. The curriculum is designed to provide students with a rigorous education in the traditional chemistry areas and a practical training in Medicinal Chemistry. The Medicinal Chemistry program is marketable and attractive to high school and undergraduate students. Illinois Tech will be the only institution to offer the Medicinal Chemistry program at the city of Chicago and the state of Illinois.

Classification of Instructional Programs (CIP):

51.2004 Medicinal and Pharmaceutical Chemistry

Required to make the program US Financial Aid Eligible - The CIP code takes the following structure: xx.xxxx Where each x is a number between 0 and 9. This 6-digit code identifies, to the greatest specificity possible, an entire instructional program. The classification scheme seeks to comprehensively address all areas of study. Because of the dynamic nature of education, however, new CIP codes are frequently added to the list. The first 2-digits are the first cut off of detail and describe the general discipline of the program. For example, any program with a CIP that starts with 14 is within the Engineering discipline; anything with a 22 is within the legal discipline. The next 2 digits increase the level of detail, and the final 2-digits provide the highest level of detail.

Find CIP codes at <http://nces.ed.gov/ipeds/cipcode>

PROGRAM VIABILITY

Competitive Programs: *Indicate other similar programs locally and nationally detail their success.*

Only five Chemistry Departments in USA offer a BS degree in Medicinal or Pharmaceutical Chemistry and have been successful in recruiting undergraduates (Med/Pharm Chem majors/ Chem majors total, fall 2016): UC Davis (500/800) U of Buffalo (47/174) Cleveland State U (36/129) Michigan Tech U (25/100), U of Dayton (25/74).

Among 33 institutions in IL that offer an ACS-approved chemistry degree, Illinois Tech Chemistry will be the only institution to offer a Medicinal/Pharmaceutical Chemistry BS program. We are well positioned to create the attractive and promising program and train undergraduates with a strong chemistry background and the requisite knowledge and hands-on lab experience to place and advance their careers in the life science and medical fields.

Market Analysis for Recruiting Students: *Detail what work has been done with UG Admissions to identify and recruit potential students.*

Illinois Tech UG admission office recently reported that “Among our domestic applications, 67 percent are from Illinois, and about half of these are from Chicago.” The Chemistry UG recruiting committee will closely work with the Dean’s office in College of Science on the advertisement of new chemistry programs and generate an attractive web link and informative program brochure to recruit prospective students in the greater Chicago Area. An immediate target group will be the students (23 admits, Fall 2017) who have been admitted to the Chemistry program this fall. The chemistry department will work with the UG admission office in an effort to communicate with the target students and public and private local high schools (~400 in the Cook County alone). The chemistry department will also seek opportunities to meet and recruit transfer undergraduates from a number of community colleges, particularly in the greater Chicago area.

Market Analysis for Graduates: *Detail what work has been done with the Career Management Center to identify potential employment opportunities for graduates.*

Industrial demand for BS medicinal chemists with both analytical and synthetic skills remains high. Particularly, R&D analytical and medicinal chemists and technicians for analytical method development and quality control and quality analysis (QC/QA) are in a growing demand. A brief job search in *LinkedIn* using the key words “medicinal or pharmaceutical chemist” also indicates the high employment demand in the field of medicinal chemistry: Chemist (1,795 jobs) and Pharmaceutical and Medicinal Chemist (420 jobs, 23% of total chemist jobs), January 16, 2017.

Students in the new program will be trained to possess understanding of pharmaceuticals and biomedical drugs and analysis-emphasized lab skills for working at medicinal chemistry-related labs including QA/QC lab, Instrument lab for method development of separation of pharmaceuticals and agrochemicals, LC/MS Chromatographic method development lab, biologic process development lab, and GMP and GLP quality lab. Students will be qualified to apply for various lab positions in major and local Pharma, Biotech, Industry, and Federal and State government. There are over 200 biotech and pharmaceutical and life science companies in the Chicago area. Students can also pursue with graduate studies in medical and pharmacy graduate schools.

ACADEMIC INFORMATION

Enrollment Estimates: *Are there enrollment estimates for this program, and if so, what are they and what are they based on? What is the minimum number of students necessary in the program to make the program viable (i.e. to offer classes unique to the program often enough)?*

We anticipate at least 5 students will be admitted to the program by Fall 2018 and 20 students by Fall 2021. IIT Chemistry has suffered a long-lasting problem of low enrollment (27 majors, Fall 2016). The proposed goal will lead to a significant increase in Chemistry UG enrollment. Students in the new program are scheduled to take the courses required for completion of the BS degree during their 3rd or 4th years in the program. Enrollment of 5 students in the new program per academic year is required to offer 2 new courses every year.

Advising Strategy: *Since quality advising is a key component of good retention, graduation and career placement, how will students be advised and mentored? Specifically for interdisciplinary programs, how will advising responsibilities be shared? What student professional organizations will be formed? How will the department work with the Career Management Center to develop industry connections?*

Students in the new program will be advised by the chemistry faculty (Prof. Joy Chong and David Minh) who are involved in the area of Medicinal Chemistry. Students will be encouraged to gain research experience and professional development in the specialized area at the research labs of the chemistry faculty. Students in the new program are required to take a seminar course and will be able to communicate with other students in the specialized programs for possible joint extracurricular activities. They will be advised to seek internship opportunities in the local chemical,

pharmaceutical, and biotechnology industry. The chemistry faculty will also develop working relationships with Illinois Tech Career Management Center and utilize personal connections to local companies.

Course Requirements: *Detail the courses needed for the program including courses currently offered, new courses to be developed (including syllabi), and dependence on courses from other academic units with their commitments to provide these courses on a long-range basis. Include descriptions of laboratories that will need to be developed along with equipment and facilities requirements.*

The majority of the required courses for the program have been regularly offered for BS Chemistry majors by the Chemistry Department. Students in the new program are expected to complete the ACS-approved BS chemistry degree requirement and take additional required courses (16 credits total) to earn the specialized degree (ACS-accredited BS in Medicinal Chemistry) as outlined below.

The core lab course (Analytical method development lab, CHEM 4B3) is required for the medicinal chemistry degree and other analytical chemistry-emphasized new programs (Bioanalytical, Forensic, and Environmental Chemistry) and scheduled for offering in Fall 2020 or Spring 2021.

With sufficient lead time, we will be able to generate a lab curriculum and ready for teaching the lab courses in our teaching labs. Illinois Tech Chemistry Department operates first class teaching labs that are equipped with modern instrument and excellent supporting systems.

Medicinal Chemistry (CHEM 4M1, 3 credits)

This course will provide an introduction to Medicinal Chemistry. Topics include structure-activity relationship (SAR), mechanistic studies of drug actions, organic chemistry in drug design, drug formulation, selectivity, affinity, efficacy, toxicity, bioavailability, metabolism, pharmacokinetics (PK), pharmacodynamics (PD), and absorption, distribution, metabolism and excretion (ADME) studies, enzyme mechanism and inhibition, drug interaction with receptors, target identification, antibody-drug conjugate (ADC) chemistry, therapeutic, diagnostic, and theranostic drugs, pharmaceutical drug analysis, case studies of preclinical and clinical trials.

Computer-Aided Drug Design (CHEM 4C1, 3 credits)

A project-based introduction to computer-aided drug design tools and the principles behind them. Molecular docking and molecular mechanics force fields for binding enthalpies. Continuum dielectric models of electrostatics and solvation. The Boltzmann distribution and alchemical binding free energy calculations. Quantitative structure property relationships, including for activity and membrane permeability. This course includes laboratory work.

Analytical method development Lab (CHEM 4B3, 3 credits)

In this lab-focused course, students will learn about method development and assessment for analysis of chemicals, polymers, drugs, and biologics. Students will gain hands-on experience in quantitative analysis and quality assurance and control of chemicals and biologics. The literature and guidance on analytical method development and validation reported by the industry and government agencies will be studied. This course will foster students to develop quantitative and technical analysis, literature comprehension, critical thinking, problem-solving, and communication skills. The selected topics for the course include analytical separation, instrumental analysis, chromatographic and electrophoretic methods, statistical analysis, quality assurance and control, analytical method validation, sampling, preparations and storage of samples and standard solutions, physiochemical characterization, good laboratory practice (GLP) requirement, and validation, verification, documentation of analytical testing methods and procedure.

Seminar in Special Topics (CHEM 495, 1 credit)

This seminar course will provide students with opportunities to learn about recent development in the specialized research fields. Students are expected to develop written and oral communication skills on the advanced and specialized topics.

Elective courses (Select 2 courses, 6 credits): Advanced Organic Chemistry (CHEM 455), Bioanalytical Chemistry (CHEM 4B1), Bioanalytical Chemistry Lab (CHEM 4B2), Environmental Analytical Chemistry (CHEM 4E2), Forensic Chemistry (CHEM 4F1), Forensic Chemistry Lab (CHEM 4F2), ChemInformatics (CHEM 4C2), Statistics for Analytical Chemists (CHEM 513), Physical Biochemistry (CHEM 538), ***Inorganic Chemistry Lab (CHEM 416). ***Required for ACS-Accredited BS degree.

Sample Curriculum/Program Requirements: Provide a sample semester by semester curriculum and the program requirements, as they would appear in the IIT Undergraduate Programs bulletin.

Learning Assessment Plan (BS in Medicinal Chemistry)

Learning Goals <i>What should students be able to do after successfully completing the program?</i>	Measures <i>What class work and assignments will be used to assess whether the student has achieved the goal?</i>	Schedule <i>When, how often and by whom will data be collected?</i>	Rubrics & Evaluation <i>How will you determine how well your students have learned this?</i>	Standards <i>What benchmarks will be used to interpret your results?</i>	Improvement <i>How will you use your assessment results to improve the program?</i>
1. Majors will Understand fundamental chemical concepts and possess basic chemistry lab skills.	Course evaluation Homework, Quiz, and Exam questions, and Lab reports	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for homework, quiz, and exam questions will be developed. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
2. Majors will develop a solid theoretical and experimental background in the traditional chemistry areas by completing the required foundation and/or in-depth course works.	Course evaluation Homework, Quiz, and Exam questions, and Lab reports	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for homework, quiz, and exam questions will be developed. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
3. Majors will acquire a fundamental knowledge of theoretical concepts in medicinal chemistry.	Course evaluation Homework, Quiz, and Exam questions	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for homework, quiz, and exam questions will be developed. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
4. Majors will master basic analytical and spectroscopic lab techniques for separation, characterization, and detection of small molecules and/or biomolecules	Course evaluation Homework, Quiz, and Exam questions	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for homework, quiz, and exam questions and will be developed. Student performance on each evaluation	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the

			criteria will be reviewed and analyzed.		department chair.
5. Majors will understand and apply theoretical concepts for analysis and interpretation of chemical and spectroscopic data.	Course evaluation Homework, Quiz, and Exam questions	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for homework, quiz, and exam questions and will be developed. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result.	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
6. Majors will develop a solid laboratory skills in chemical and instrumental analysis of small molecules, large biomolecules, or complex mixtures.	Course evaluation Homework, Quiz, and Exam questions, and Lab reports	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for presentations and reports. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
7. Majors will develop a sound theoretical and experimental background in drug design, analysis, action, and synthesis, and medical and pharmaceutical applications.	Course evaluation Homework, Quiz, and Exam questions, and Lab reports	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for presentations and reports. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
8. Majors will demonstrate competence and efficiency in searching literature and database systems related to chemistry and specialized chemistry areas.	Course evaluation Homework, Quiz, and Exam questions, and Lab reports	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for presentations and reports. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.
9. Majors will comprehend fundamental concepts described in research articles and demonstrate their understanding of the subject matter in the format of technical report and oral presentation.	Course evaluation Oral presentation in undergraduate seminar and chemical literature search Written reports and technical summary of research presentations, laboratory reports	Data will be collected every semester or every year	Evaluation criteria and scoring rubrics for presentations and reports. Student performance on each evaluation criterion will be reviewed and analyzed.	Refer to information on evaluation of the same program in peer institutions. Department's course evaluation result	Review assessment result and revise curriculum and evaluation and teaching methods and collect feedback from other chemistry faculty and the department chair.

Curriculum Map (BS in Medicinal Chemistry)

Learning Goals	Introduction and foundation Course Work	In-Depth Course Work	Elective Courses for In-Depth Course Work
